

Linear - sp

sp orb. \rightarrow 50% s, 50% p

Trigonal Planar - sp^2

sp^2 orb : 33% s , 67% p

Tetrahedral - sp^3

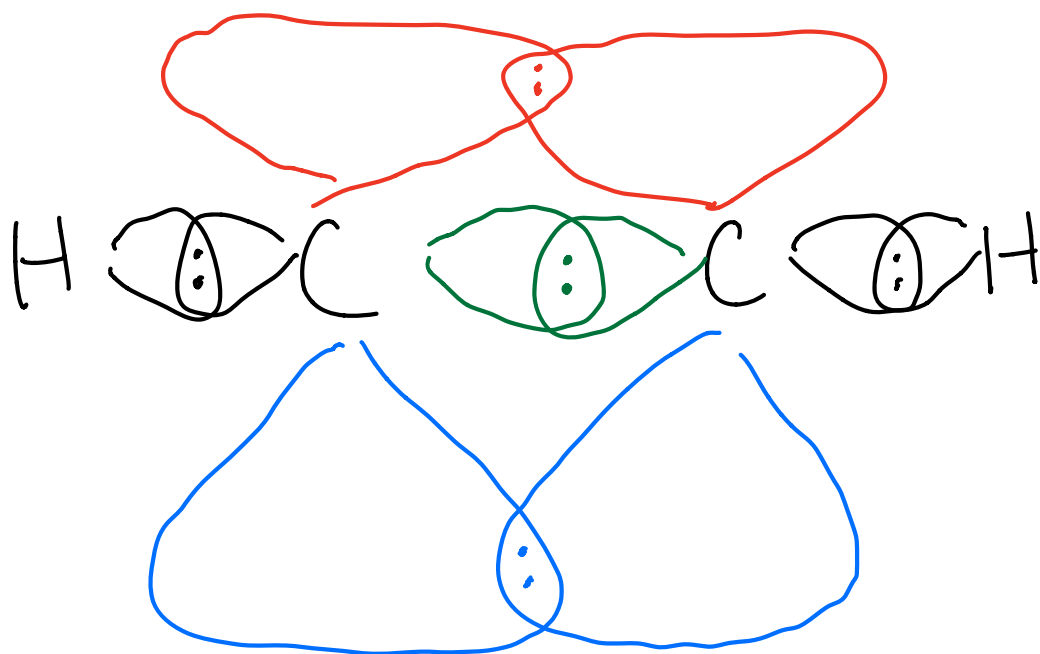

$sp^3 \rightarrow 25\% s, 75\% p$

Bond # 1 : σ bond
(side to side)

Bond # 2 : π bond
(overlap)

Bond # 3 : π bond
(overlap)

How many sp atoms?

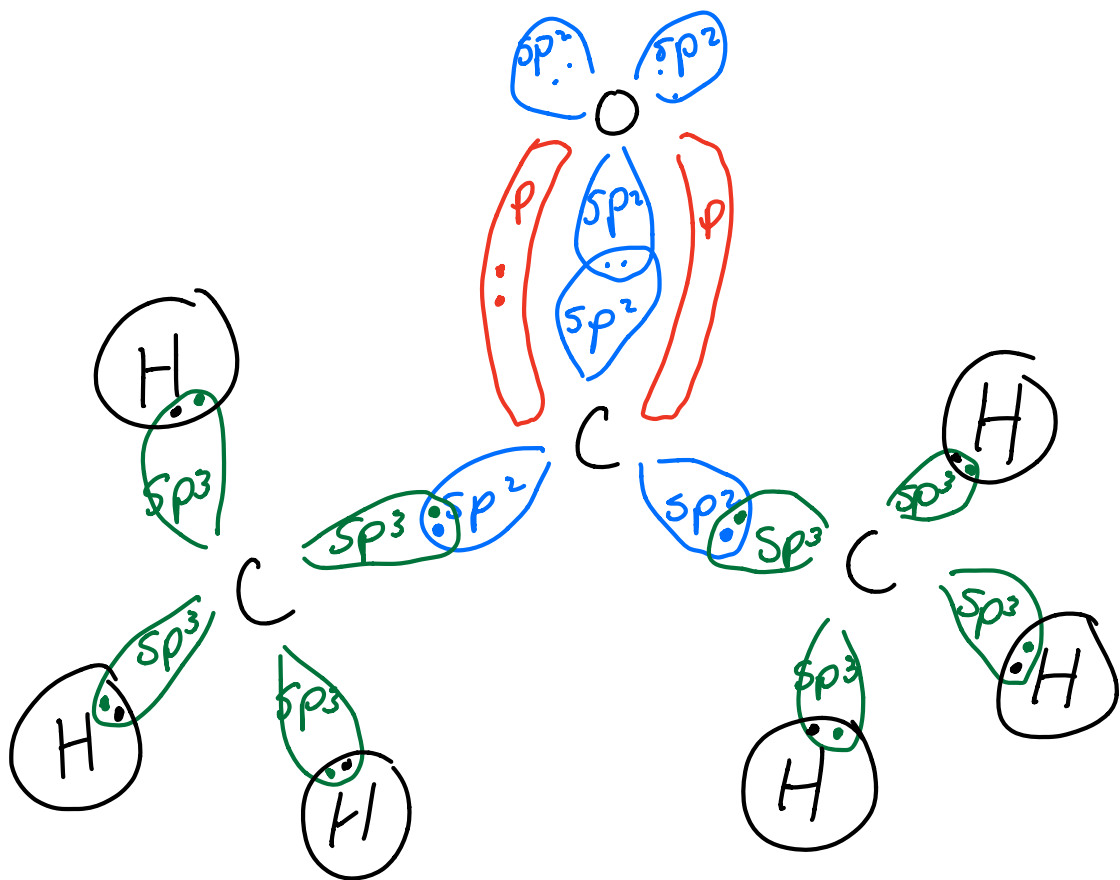

0

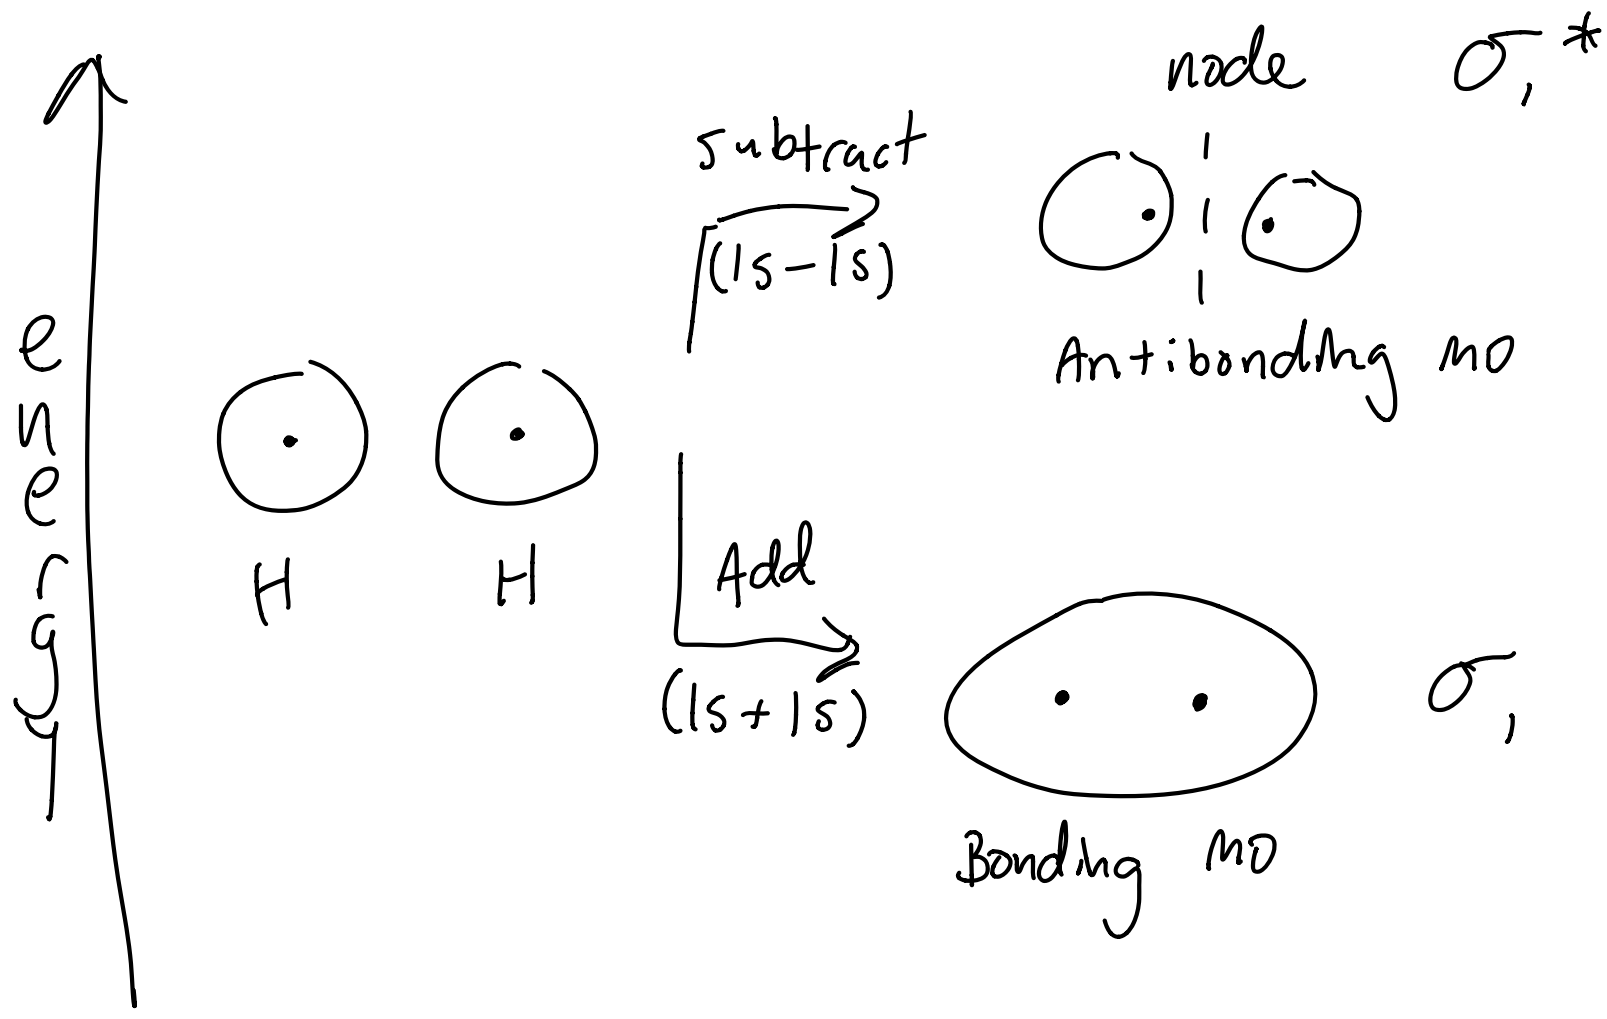

How many sp^2 atoms?

2

How many sp^3 atoms?

2

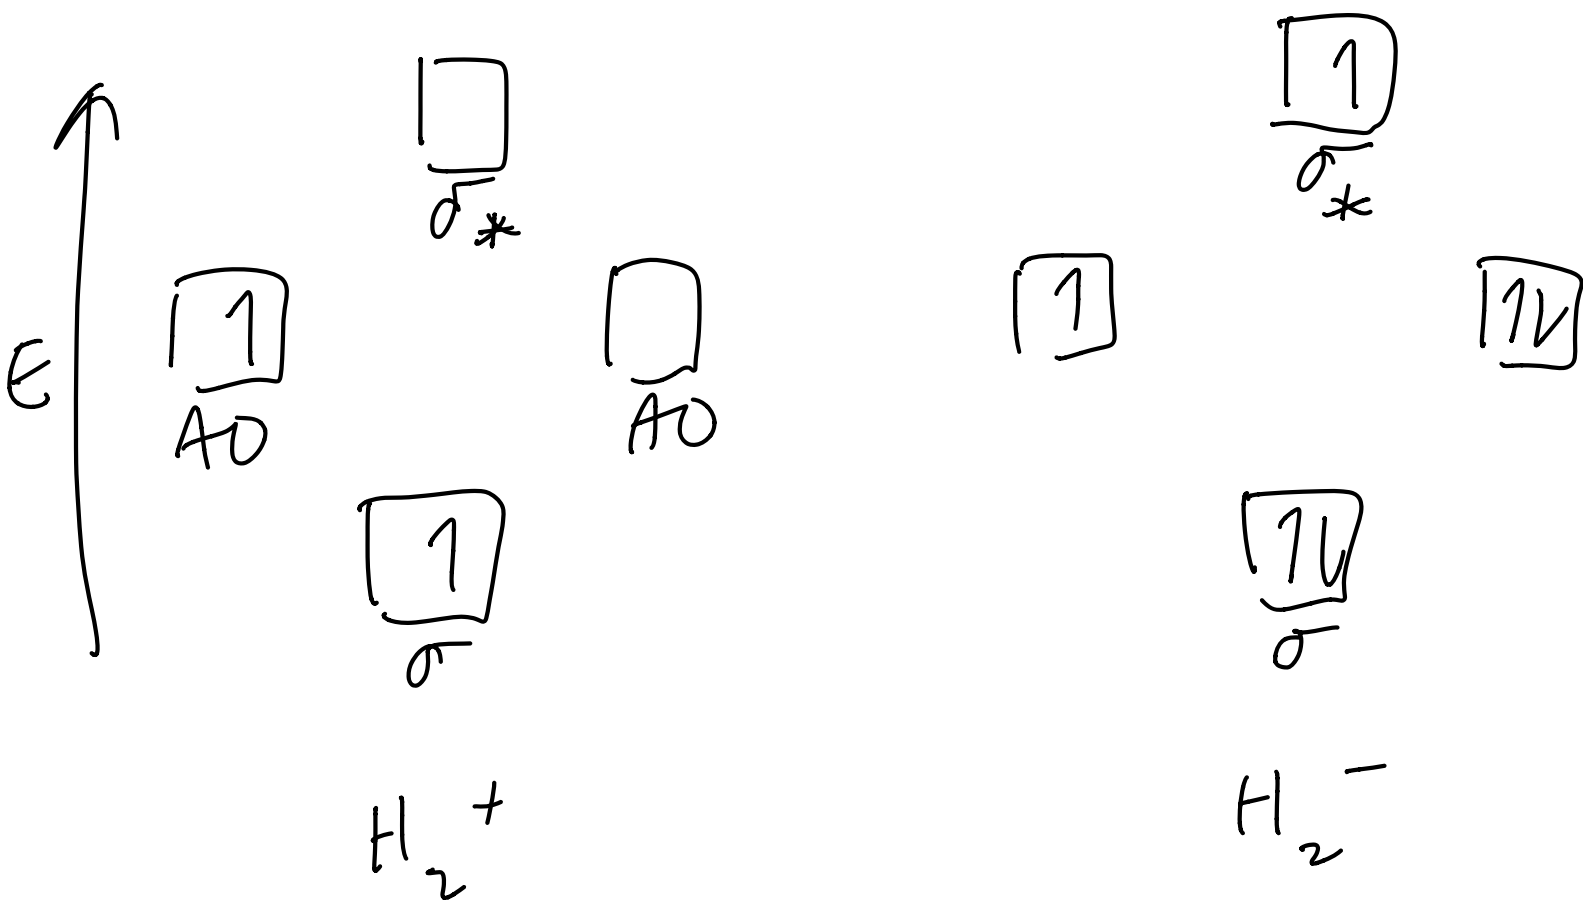

$$\text{Bond order} = \frac{1}{2} \left[(\# e^- \text{ in } \sigma) - (\# e^- \text{ in } \sigma^*) \right]$$

If Bond order is ...

⊕ → reaction will
proceed

0 → no reaction

Use MO diagrams to find bond orders and determine if H_2^+ and H_2^- exist

NO
